USES OF CRIMINAL JUSTICE DATA

GENERAL USEFULNESS

Is crime a minor problem? Is the administration of criminal justice in Wisconsin equitable, swift, efficient and economical? Is there nothing that can be done to improve its operations? If the answers to these questions are affirmative, then there is little need for a document of this nature or for an attempt to improve our system of criminal justice. On the other hand, if we refuse to accept the present incidence and impact of crime, and believe there is much that can be done to enhance the process of criminal justice, then positive and enlightened action is called for. However, actions must be based on valid and complete measurements of the problems we face. The prerequisite for effective problem definition and analysis is information, and the areas of crime reduction and criminal justice improvement are no exceptions.

Throughout history crime has generally been perceived as a serious social problem. Criminal behavior is one of the major domestic concerns in our nation today, and our citizens have the right to be informed of the full nature, magnitude and trend of the crime problem. Moreover, without such a disclosure it is impossible to assess the real costs of crime in our society. For in the final analysis, it is the public who pays the costs - psychic, physical and economic - of criminality. They are the group who have their behavior patterns altered by their fear of attack, suffer the consequences of physical assault and have their possessions stolen or damaged. They pay higher insurance rates because of offenses against their property, as well as a higher price for goods and services due to business losses from organized and unorganized crime. The public has a right to know the complete extent of all these costs. Through their taxes they support the institutions of our criminal justice system and, as citizens in a democracy, they have the right and obligation to appraise the allocation and effectiveness of limited governmental financial resources. Finally, both cooperation as individuals and group action by our citizens are required for crime reduction and improvement of our criminal justice system. But cooperation and action will not be forthcoming unless and until they receive a more complete disclosure of the true nature of crime and criminal justice.

Wisconsin's Governor, Attorney General and Legislature, and elected representatives at all local levels, require information concerning our crime problems as a basis for determining how best to allocate limited public funds. More adequate disclosure of the extent of criminality and the workings of our criminal justice system should facilitate decisions regarding legislation and appropriations for law enforcement, prosecution, defense, courts and corrections as opposed to concerns and allotments for other pressing social problems. Information concerning crime, criminals and the performance of our criminal justice system is vital for such decision-making, but, unfortunately, available data are still inadequate.

Effective solutions to the crime problem will depend on increased research to determine and assess the causes of crime and to develop and test theories of criminal behavior. All of these efforts require comprehensive and valid criminal statistics. Social scientists and professional criminologists require quantified data that will indicate who commits what types of crimes in order to establish typical "profiles" of criminals. Such profiles can help determine the proper focus and direction of crime prevention programs. However, studies of only limited applicability have been conducted to date, due to the lack of available quantified information.

Administrators at every level of the criminal justice process require information with which to measure their workloads, identify and solve operational problems and evaluate effectiveness. The lack of valid and complete statistics is critical when the needs of these managers are considered. Data are required for program planning, development, budgeting and evaluation, for estimating resource requirements and for allocating manpower and equipment. Information is also required to develop comparative norms of performance, for cost effectiveness studies and for establishing data bases with which to analyze the criminal justice system at the local level.

There is a beneficial tendency to study criminal justice programs that have been successful historically or in other jurisdictions, and analyzing these may be useful to the local executive if such information is properly employed. Consideration may be given to utilizing the types of programs and resources that have proven successful elsewhere or in the past, but only after the characteristics of current local problems have been sufficiently determined. Administrators must first define the nature of their problems and only then review potential solutions. Programs must be adapted and tailored to fit unique local conditions. Administrators can and should identify the successful methods of others but must constantly appraise their applicability. This assessment requires information.

USEFULNESS TO LOCAL LAW ENFORCEMENT AGENCIES

The primary function of law enforcement is to safeguard the lives and property of the public. However, as in other endeavors, the situation is one of determining the best allocation of limited personnel and equipment resources. Police administrators are faced with the task of making decisions to achieve efficient and economical operations in their departments, but only through the use of accurate and complete information can these decisions be made and the results determined. Law enforcement administration and operations involve management functions, and the right information in the correct form at the proper time and place is necessary for effective management. What are the elements of the management decision-making process, and what are the types of information needed?

IDENTIFYING PROBLEMS. All police executives are faced with problems, but there is a need to get at the real nature of these problems and to define them in as much detail as possible. Is the level of criminal activity increasing? If so, what crimes are on the upswing? Facts need to be known as to the character, extent and distribution of crime - its type, its amount, its hourly, daily and seasonal patterns and its geographical occurrence. Facts are needed concerning the nature of persons arrested and convicted - their age, sex, race and other characters. Information is required to answer the questions of "what?", "when?", "where?", "how?", "who?" and, in particular "why?". Information is a prerequisite for identifying and examining real problems, not just symptoms.

ESTABLISHING GOALS. When problems are detected and understood, meaningful and realistic goals should be established for their solution. Goals should be formulated in terms of the results expected, and expected results should be stated as specifically as possible to provide for both direction and concentration of effort. For example, a goal of "reducing crime" is less meaningful than one that seeks to "reduce the nighttime residential burglaries by twenty percent". When information enables goals to be properly and realistically designed, they can be the cohesive force that ties together the diverse activities of a department into a meaningful united effort. Goals can create additional commitment on the part of law enforcement officers and provide challenges through which change and improvement may be obtained. Finally, adequately expressed goals frequently imply actions required and measures of performance.

PLANNING FOR SOLUTION. Information has facilitated the identification and analysis of problems and the development of appropriate goals. Now, plans must be prepared for achieving the established objectives (solving the problems). Skilled analysis of who is committing what crimes, and where they are being committed, will frequently suggest appropriate strategies for prevention and control. Several alternative programs may be defined. Then, based on information as to what has worked for the department in the past, or what has proved successful in similar jurisdictions with similar problems, the best program can be determined and implemented.

ESTABLISHING FEEDBACKS FOR MEASUREMENT AND CONTROL. Enlightened police administrators do not wait until a program has run its course before receiving information regarding the degree of success or failure. Rather, they build interim measuring devices into their programs that will feed back information concerning how well the programs are doing. Specific programs may be divided into program elements, and target dates and goals may be established for each element. The administrator wants to know if his department is keeping on course toward its overall goals. If it is not, he wants to know so that corrective action may be taken before the final results are in. Then it is too late for supplemental efforts. The essence of management control is to keep the department on course toward its objectives.

EVALUATING RESULTS. At the conclusion of a program, the results must be analyzed in relation to the goals. Success or failure must be objectively determined from available information. If success was achieved, is it possible to attribute this to specific characteristics of the program? Can these characteristics be employed in other programs? If failure occurred, there is a need to find out the reasons why. Was it because the goals were unrealistically high? Was the program inadequately designed? Can methods be identified with which to improve programs in the future?

The above was a brief description of the process by which executives make problem-solving decisions. It is readily apparent that accurate and complete information is vitally important at every step. The following products of Uniform Crime Reporting and group averages as developed by the Crime Information Bureau provide the law enforcement or criminal justice administrator with valuable information*:

1. Crime rates.
2. The nature of crimes known to have been committed, and the average and total value stolen in different types of offenses.
3. The type of property stolen and recovered, by value, along with the recovery ratio.
4. Percent of crimes cleared.
5. Juvenile involvement in clearances of offenses.
6. The number of arrests and the rate per 100,000 population.
7. Juvenile arrests and the rate per 100,000 juvenile population.
8. Relative number of juvenile offenders handled within the department and released, referred to court or probation department, referred to a welfare agency or referred to another police agency.
9. Information regarding the final disposition of persons arrested and charged.
10. Law enforcement strength per 1,000 population.
11. The number of assaults on officers, with and without injury, the type of weapon used and other characteristics of these attacks.
12. Trends in the above data.
13. Analogous data for other selected agencies, or group averages, for comparison purposes.

Police administrators may wish to utilize the above types of information. If necessary management data are presently unavailable in a department, a records system should be considered that will provide the proper information in the correct form and at the right time and place to give maximum benefit in decision-making. One of the functions of the Crime Information Bureau is to give assistance to local law enforcement agencies in the areas of information collection, storage, analysis and utilization.

Law enforcement administrators will find much basic data, as well as comparative intrastate information, in this document. Another source is the eight Monthly Comparison Reports furnished by the Crime Information Bureau to UCR direct contributors, which provide a rapid and in-depth review of trends.

CRIME REPORTING IN WISCONSIN

WISCONSIN UNIFORM CRIME REPORTING PROGRAM

Wisconsin Criminal Justice Information, Crime and Arrests - 1969, the Crime Information Bureau's first annual report, was published based on data furnished by the Federal Bureau of Investigation. These statistics had been collected by the FBI under the national Uniform Crime Reporting (UCR) Program. During 1970, law enforcement agencies in our state continued to contribute directly to the Federal system, with a copy to the Crime Information Bureau. However, beginning in January of 1971, Wisconsin Police Departments and Sheriffs' Offices began utilizing Wisconsin UCR forms and sending data directly to the CIB. The Crime Information Bureau reviews, verifies and forwards these data to the Federal Bureau of Investigation, generally by computer tape.

Monthly Comparison Reports that relate current activity to activity in relevant prior periods of time are routinely returned to agencies following submission of UCR data. A series of Comparison Reports are returned each month. Each contributor receives an Annual Summary Listing of its aggregated monthly UCR data. Final national and inter-state data were unavailable at the time of this writing, but comparisons with these data will be published later in the year as a Supplemental Annual Report following release of the Federal Bureau of Investigation's Crime in the United States document. Quarterly reports are also issued. Special reports on particular crime topics have been published by the Crime Information Bureau and, because space limitations prohibit the publishing of all data collected, the agency has responded to many

The Wisconsin UCR Guide and the Wisconsin UCR Form 100 Guide have been disseminated to reporting agencies for instructional purposes. Crime Information Bureau representatives are available to assist local and state criminal justice agencies in all phases of the CIB's programs, including Uniform Crime Reporting.

The underlying long-range philosophy of the CIB's Uniform Crime Reporting Program is to collect, analyze and disseminate information that will present a more relevant, and more timely, picture of criminality in our state. However, the most pertinent review involves comparisons with appropriate standards. Therefore, in addition to presenting basic information reported, comparative norms or averages are also developed.

Care should be exercised in making comparisons of the data in this report with the data contained in previous annual reports. Adjustments may be required due to the following reasons:

- Shifting of a law enforcement agency from one population category to another based on annual re-estimation of the jurisdiction's population.
- On occasion, the Federal Government designates an additional Wisconsin County as being included in a Standard Metropolitan Statistical Area. This shifts a Sheriff's Office from the Rural Areas Category to the suburban Sheriffs' group and shifts the cities within the county from Non-Suburban Cities to Suburban Cities.

Assistance in report interpretation, or more detailed information, may be secured by contacting the Crime Information Bureau.

UNIFORM CRIME REPORTING INFORMATION COLLECTED

Section 165.83, Wisconsin Statutes, requires that the Division of Law Enforcement Services in the Department of Justice (of which the Crime Information Bureau is a part) "Collect information concerning the number and nature of offenses known to have been committed in the state, the legal action taken in connection with such offenses from the inception of the complaint to the final discharge of the defendant and such other information as may be useful in the study of crime and the administration of justice. The administrator of the division may determine any other information to be obtained regarding crime statistics. However, the information shall include such data as may be requested by the FBI under its system of uniform crime reports for the United States." Section 165.84 requires that "All persons in charge of law enforcement agencies, all clerks of court, all municipal justices where they have no clerks, all persons in charge of state and county penal and correctional institutions and all persons in charge of state and county probation and parole offices, shall supply the division with the information so requested." While such a sweeping information-gathering mandate is essential for an effective analysis of crime and our criminal justice system, the Crime Information Bureau nevertheless depends on both the cooperation and integrity of State and local agencies in submitting accurate and complete data.

At this stage in the development of the Wisconsin Uniform Crime Reporting Program, form content generally matches that of the national reporting system as administered by the Federal Bureau of Investigation. The CIB expects that data collection will be logically expanded in the future as additional relevant information needs are determined, while at the same time collecting the national UCR statistics as a minimum.

Of primary importance is the necessity that all Wisconsin Police Departments and Sheriffs' Offices contribute data. All Sheriffs' Offices and, generally speaking, all city, village and township Police Departments serving jurisdictions above 2,500 persons contribute the full complement of UCR returns directly to the Crime Information Bureau. Smaller Departments complete a simplified return and submit it to their Sheriff's Office. The Sheriff, in turn, prepares reports that reflect the consolidated activity of his own and these smaller agencies.

During the year of this report, recurring statistics gathered by the Wisconsin Program fell into three basic areas: offenses, arrests, and law enforcement employes. Offense data were reported to the Crime Information Bureau on a monthly basis to indicate the number of murders and nonnegligent manslaughters, non-traffic negligent manslaughters, forcible rapes, robberies, aggravated and simple (non-aggravated) assaults, burglaries, thefts and motor vehicle thefts that became known to law enforcement agencies. These crime counts were obtained from records of complaints received from victims or other sources, or discovered by the police during their operations. Complaints determined by police investigation to be unfounded (false or baseless) were eliminated from the final count. Homicides classified as "justifiable" under this Program were also excluded from the final murder counts. The numbers of "offenses known" in each of the above crime categories were reported without regard to whether anyone was arrested, stolen property was recovered or prosecutive action was taken. Data were also collected on the number of these offenses cleared (by arrest or by exceptional means) and the number of clearances involving only juveniles. The monthly incidence of sexual assault, and arsons were reported on semiannual surveys.

Supplementary data were collected concerning all homicides, forcible rapes, robberies, burglaries, thefts and motor vehicle thefts. The homicide returns provided detailed information on the age, sex and race of the victim and offender, the weapon used or cause of death and additional facts surrounding the crime in the case of all reported murders, nonnegligent manslaughters and non-traffic manslaughters by negligence. All agencies reported the value of property losses incurred in murders and forcible rapes and in various types of robberies, burglaries and thefts, the losses as a result of motor vehicle thefts and the number of stolen motor vehicles recovered. Their returns also indicated, for certain major categories, the value of property stolen and recovered.

All departments report data monthly regarding the age, sex and race of persons arrested for each "Part I" and "Part II" offense committed in the reporting jurisdiction. (In general, Part II crimes are those that are less severe, committed more frequently or less apt to come to the attention of the police.) Arrests for Controlled Substances violations were subdivided into those for sale/manufacturing as opposed to those for possession, and total arrests for other agencies were recorded. Separate returns are submitted for adults and for juveniles (under 18 years of age). In addition, the law enforcement disposition of young persons arrested (for local crimes) is recorded on the juvenile form.

Law Enforcement employe information is obtained annually. The numbers of actual full-time sworn officers and civilian employes as of July 1 were reported, as was the sex of these employes. Information was also collected regarding authorized strength and the number of specially-funded employes. A monthly form to record the number of assaults on officers and the number of officers killed in the line of duty also furnishes detailed information relating to the type of activity in which the officer was engaged at the time of the assault, the type of assignment, the approximate time of occurrence, whether or not the officer sustained injury, the type of weapon and clearances.

The response of Wisconsin law enforcement agencies following the Crime Information Bureau's assumption of its role as Wisconsin's centralized statewide Uniform Crime Reports collection agency has been decidedly positive. Moreover, the statewide crime and arrest reporting program has tended to generate new or greater interest on the part of local departments in the areas of record-keeping, statistical reporting and data analysis.

All Direct Reporters in Wisconsin continue to submit the full range of UCR information as required on a monthly basis. The table summarizes historical reporting experience in terms of offenses and arrests. All agencies submitted these returns as required during the year of this report. In addition, 148 other smaller Police Departments forwarded one or more monthly offense and arrest reports to their local Sheriff during the year.

Attention to three general areas guides the Crime Information Bureau in the continued development of Wisconsin's Uniform Crime Reporting Program. One area is the elimination of any duplication in reporting. When a small agency receives assistance from the Sheriff's Office in an investigation, there is a tendency for both to report the crime. Secondly, while many of the smaller Police Departments in the state (non-Direct Contributors) have been submitting offense and arrest data to their local Sheriff for consolidation in his Uniform Crime Reports, the regular participation of every one of these agencies will be solicited. Finally, the Crime Information bureau will continue to work with all UCR contributors, as the need arises, in the areas of improved records systems and better quality crime and arrest reporting. To this end, the Wisconsin UCR Guide and the Wisconsin UCR Form 100 Guide were published and disseminated to Wisconsin law enforcement agencies.

UNIFORM CRIME REPORTING CONCEPTS

Information currently collected by the Wisconsin Program is generally the same as that gathered by the national system, and the methods of classifying and scoring offenses and arrests are the same. This readily enables comparisons with other states and the Nation but the information gaps present in the national program are also inherent in Wisconsin's system.

Development of the nationwide Uniform Crime Reporting Program began almost fifty years ago. In 1930, crime counts were first requested from local Police Departments, with the Federal Bureau of Investigation designated by Congress to collect, compile and analyze these statistics. The Committee on Uniform Crime Records of the International Association of Chiefs of Police played a primary role in the origin and development of the UCR Program and, to this day, serves in a strong advisory capacity. Standardized offense classification and scoring procedures to insure uniformity and consistency of data are the keynote of the reports. All of the Uniform Crime Reports have been designed so that they are a by-product of information that a law enforcement agency should routinely compile for its own efficient administration and performance. The underlying philosophy and focus is and always has been oriented toward police statistics for use by law enforcement agencies, but the unique nature of the program makes the data invaluable for use by elected officials and the American public.

The Uniform Crime Reporting Program has been subjected to much criticism during its history and, while many of these commentaries have been valid, at least some of the shortcomings are understandable when it is remembered that the program has been developed to furnish management information for use primarily by law enforcement agencies. The Uniform Crime Reports are not a court or corrections statistical program. They are not designed to furnish an overview of the workings of our entire criminal justice system, nor are they able to give the complete picture of law enforcement activity. The main goal of the UCR Program is to furnish police administrators with a measure of their activities and operational problems, as indicated by the number of reported offenses, arrests, clearances and the like. While UCR statistics are an indication of known criminal activity in a particular geographic jurisdiction, they fall far short of measuring all law enforcement efforts.

Therefore, much of the criticism of the UCR Program itself is weakened when its stated primary purpose is kept in mind. Uniform Crime Reports data are the best crime information currently available since they reflect the key events (criminal offenses) that set in motion the various phases of our criminal justice process. The number of arrests, prosecutions or convictions, while capable of more precise measurement, nevertheless is less indicative of the amount and nature of crime because such data are further removed from the original event. But because the Uniform Crime Reporting Program is the only recurring crime and arrest reporting program operating on a national level, of necessity it serves as the base for assessing the many significant information gaps at the input end of the criminal justice system.

A first step in the control of crime is to ascertain the true dimensions of the problem. However, present statistics as gathered by the UCR Program measure neither the real incidence of crime nor the full amount of economic loss to victims. Information regarding number of offenses and clearances is collected only for the eight Part I crimes, plus non-aggravated assault. Value and type of property stolen and recovered data are requested only for property stolen in Part I offenses. Values recorded are those at the time of initial loss and at the time of recovery. While some items may have appreciated in the interim, frequently property is recovered in a damaged or otherwise devalued condition. This must be kept in mind when reviewing UCR recovery ratios. For the Part II offenses (except non-aggravated assault and arson), the only information submitted is the number of arrests for these crimes according to the age, sex and race of the subject. Consequently, there is no record of the actual number of these offenses occurring, nor is there a calculation made for property loss, as in cases of vandalism and embezzlement.

The returns completed by law enforcement agencies deal only with offenses that become known to them, and no data are routinely collected to measure the total amount of crime that actually occurs. Studies indicate that a substantial number of victimizations are not reported to the police. Aside from the problem of victims not reporting all offenses to the police, the Uniform Crime Reporting Program by design receives input information on only certain crimes. And if more than one of these occur in the same incident, only the most serious is scored according to a "hierarchy" of offenses. If a murderer steals the automobile of his victim, the motor vehicle theft is not scored.

The "Crime Index", which is a count of the number of certain offenses, as they occur, is used as the basic measure of the extent, fluctuation, distribution and nature of crime in our society. Offenses selected to comprise the Index include the "Violent Crimes" of murder and nonnegligent manslaughter, forcible rape, robbery and aggravated assault and the "Property Crimes" of burglary, theft and motor vehicle theft. The well-known Crime Index is merely the total number of these seven offenses that have become known to the police. The rationale behind the use of the Index is that: (1) it reflects the true occurrence of crime better than any other kind of data, (2) it includes serious offenses that are most accurately reported and of most concern, (3) it only includes those crimes that can be uniformly defined and (4) it includes offenses that occur frequently without regard to geography but do not have an unmeaningfully low or unmanageably high rate of incidence.

It is an open question if the relative incidence of only the seven Index crimes can adequately reflect the trend of criminality in our society. For a measure to be a valid index, its relationship to the total must be known. Unfortunately, the relationship of the Crime Index to total crime (all crime, both reported and unreported) has never been conclusively determined and, therefore, fluctuations in the Crime Index may or may not accurately reflect changes in our total crime picture.

The Crime Index does not take into account the varying degrees of seriousness of its seven components. Each crime receives the same weight as it is added to the Index. Consequently, a motor vehicle theft is counted the same as a murder, and an aggravated assault is weighted equally with an attempted burglary. Any review of crime must consider the volume, rate and trend of each offense that comprises the Index and the relationships between these crimes.

Crime and arrest rates are generally expressed as the number of offenses or arrests per 100,000 permanent resident population. This rate calculation method makes no allowance for the impact of a community's seasonal visitors or residents. Moreover, distinctions are not made between crimes committed by residences, as opposed to those involving non-residents, just as a person's place of residence has no statistical impact if he becomes a crime victim. The population of a community is known precisely only when a regular decennial or other special census is conducted; in other years estimates must be employed. Even so, crime rates based on total population do not consider relevant aspects of population composition, such as the number of females in a particular age group for forcible rape rate calculations. Furthermore, rates based on the number of structures might be more appropriate for use in burglary rate calculations, as would the number of registered motor vehicles in the case of motor vehicle theft rates.

The Wisconsin and national Uniform Crime Reporting Programs are designed to measure *offenses* committed and *persons* arrested, and difficulty can arise if this distinction is not kept firmly in mind. Crimes relate to events, but arrests relate to persons. Unlike traffic violations where there is usually one event, with one violation and one offender, a single criminal act can involve several crimes, several offenders and several victims. Relating specific crimes to the criminal, or specific offenses to characteristics of those arrested, is generally beyond the scope of the present Uniform Crime Reporting system.

Clearance rates reflect the proportion of criminal acts that are solved. However, the arrest, charging and turning over to a court for prosecution, of only one of several offenders involved in a given crime is sufficient for a clearance to be scored. Therefore, clearance rates cannot be viewed as indicating the true degree of criminal apprehension.

Juvenile crime and arrest statistics may also be open to question. Many juvenile offenders are handled informally and, as a consequence, inaccurate or incomplete recording of the event or action may result. Procedures for handling juveniles vary between departments much more so than in the case of adult offenders. Furthermore, the degree of juvenile involvement in solved offenses is probably seriously understated because juvenile participation in clearances is recorded only when juveniles are *exclusively* involved. When both adults and juveniles are subjects in a clearance, the juvenile participation is not reported.

Uniform Crime Reporting is geographically-based, with law enforcement action (recovery of stolen property, arrests and clearances) related back to, and consequently reported by, the agency in whose jurisdiction the offense occurred. This principle applies even though another department made the recovery or arrest. Geographically-based reporting concepts are particularly critical in the case of Sheriffs' Offices. Sheriff are by law the chief law enforcement officers in their counties and, as such, assist municipal police departments in varying degrees. However, this assistance is not reflected in the Uniform Crime Report of the Sheriff's Office if the agency assisted is itself a Direct Contributor. UCR data provide an imprecise measure of agency workload.

Arrests as reported do not measure the number of specific individuals taken into custody, as the same person may be arrested more than once during the year for the same type of crime or for different types. Each separate apprehension is recorded.

Superficial conclusions are sometimes drawn from the UCR crime and arrest data, in particular when attempting to make comparisons between jurisdictions, because all factors that have an impact on crime problems are not measured or explicitly considered by this program. Municipal ordinances, local criminal justice administrative policies, efficiency and thoroughness of record-keeping, and Uniform Crime Reporting proficiency and practices all affect the number of crimes and arrests reported. In addition, socio-economic conditions and the characteristics and attitudes of the local population influence the magnitude and nature of criminal behavior in a community. General factors which can affect the amount of crime reported, and which must be expressly examined for an intelligent appraisal of interjurisdictional UCR data are as follows:

CRIME FACTORS

- Density and size of the community's population and the surrounding area.
- Composition of the population, with reference particularly to age, sex and race.
- Economic conditions, including job availability.
- Relative stability of population, including commuters, seasonal and other mobile types.
- Cultural conditions, such as educational, recreational, moral and religious characteristics.
- Climate, including seasonal weather conditions.
- Administrative and investigative efficiency and emphasis of the local law enforcement agency, including the degree of adherence to crime reporting standards.
- Effective strength of the law enforcement agency.
- Standards governing appointments to the law enforcement agency.
- Relationships and attitudes of law enforcement and the community. Attitudes of the public toward crime and their crime reporting practices.
- Organization and cooperation of adjacent and overlapping law enforcement jurisdictions.
- Attitudes and policies of prosecuting officials, courts and corrections.

Because of these various considerations, the Wisconsin Crime Information Bureau is not in a position to assess the underlying factors that determine a particular community's level of reported crime and associated law enforcement activity. Questions on these matters should be addressed to the local department involved.

While current methods of gathering and reporting crime and arrest data provide a less than complete picture of criminality in our state, there is at present no other statistical information system that will more adequately perform this task. Consistent data, in terms of crime categorizations and units of measurement, are not available with which to accurately assess the operation and problems of our total criminal justice system. Hence, no statistically-supported judgments can be made concerning the functioning of a system which requires hundreds of millions of dollars in funding on an annual basis. Deficiencies in information are apparent: the passage of time cannot be accounted for, and therefore the degree of economy and swift justice cannot be measured; the true degree of recidivism, or recurring criminal behavior, cannot be measured; lacking data concerning dispositions at various levels of the criminal justice system, or the number of subjects passed through succeeding legal statuses, the efficiency of the process cannot be realistically evaluated. Development of systemwide criminal justice statistics for Wisconsin has not come about; rather, the Uniform Crime Reporting Program furnishes basic information with respect to the law enforcement segment, information systems for the court and correctional segments are in place, and statewide data systems for the prosecutorial and legal defense segments are nonexistent. Information gaps will never be surmounted if we continue to view these various statistical information systems as independent from each other. What is required is a system-wide information collection effort, centrally administered and with a consistent reporting methodology employed by each criminal justice segment. The best approach may be to have the offender passing through the criminal justice process as the unit about which all data are gathered. The foundation for such a statistical information system already exists, at least for felons and statutorily-specified misdemeanants. However, these records are not stored in an automated environment, and statistical summaries are unrealistic based on personnel resources in the absence of a computerization effort.

REASONS FOR STATE OF WISCONSIN PARTICIPATION IN UNIFORM CRIME REPORTING

The State of Wisconsin has legally enacted a mandatory Uniform Crime Reporting Program, and the Crime Information Bureau has been established as the state agency responsible for the centralized collection, analysis and dissemination of these data. Many other states have operational state UCR Programs and are forwarding crime statistics to the Federal Bureau of Investigation or have programs in various stages of development. Mandatory crime reporting programs at the state level have been implemented in Wisconsin and elsewhere for several important reasons.

In the absence of a state law requiring the contribution of data, participation in the national program as conducted by the Federal Bureau of Investigation is entirely voluntary, and an agency may choose not to contribute. The FBI does not make estimates by state for the arrests occurring in non-reporting areas but, traditionally, estimates are made for offenses. Nevertheless, these calculations, however logical, cannot precisely indicate the level of known criminal activity, and it should be remembered that the national Crime Index is not based on complete reporting by all law enforcement agencies. Lack of reporting, or underreporting, may occur due to varying administrative policies or unfamiliarity with proper classification and scoring procedures. Unfortunately, record-keeping and statistical compilations often receive less attention, in the law enforcement function, than they deserve. However, a mandatory program and the involvement of a state agency should result in more departments contributing information. In particular, a state agency can establish better rapport with local departments and is in a better position to overcome obstacles to reporting. Consequently, fewer of these estimates will need to be made. This has definitely been the experience in Wisconsin.

Crime Information Bureau participation has provided for better control, and a uniformly higher quality, of crime and arrest reporting. The Federal Bureau of Investigation, receiving returns from over 15,000 law enforcement agencies, is sometimes hard pressed to insure both the accuracy and the reasonableness of all submitted data due to the sheer volume of workload. Resolution of questions by both verifiers and submitting agencies is of necessity time-consuming. Hence, it is entirely logical for a centralized state agency to receive and verify UCR returns and then forward the data to the FBI.

Moreover, the involvement of an agency at the state level creates a source more responsive to the information needs of both state and local authorities. With the emergence of the CIB as Wisconsin's centralized state data collection agency, offense and arrest statistics can be, and are, presented separately for each agency that reports directly, to furnish a localized and detailed review. These departments are grouped by geography and size of jurisdiction into categories not presented in the nationwide document published by the FBI. Agencies can, therefore, better compare their workload and performance with that of others serving jurisdictions with similar characteristics. Furthermore, during 1972 the Crime Information Bureau began supplying direct contributors with monthly and year-to-date reports that compare their current offenses and arrests with activity in relevant prior periods of time. These Monthly Comparison Reports furnish administrators with a timely analysis of trends.

Finally, the information needs of state and local officials in resource allocation decisions are acute. It is hoped that the Wisconsin Crime Information Bureau can serve as an objective statewide source of factual criminal justice data. These statistics can be utilized in assessing relative requirements and establishing priorities for the allocation of resources.

Attempts or assaults to kill are classified as aggravated assaults and not as murder. The crime count for this offense category also excludes suicides, accidental deaths and justifiable homicides.

No Wisconsin law enforcement officers were killed in the line of duty by felonious action during 1979.

One offense is counted for each victim of a murder.

DEFINITION: Forcible rape is defined as the carnal knowledge of a female through the use of force or the threat of force. Assaults or attempts to commit forcible rape are included. Statutory rape (without force) is not counted. Crime counts in this category are limited to actual offenses of forcible rape or attempts as established by police investigation.

One offense is counted for each victim of a forcible rape.

The Uniform Crime Reporting definition of forcible rape is not the same as the Wisconsin Statutes definition of sexual assault. Sexual assault information in this report is limited to the number of sexual assaults known to Wisconsin law enforcement agencies. Statewide figures are shown at the bottom of the following page. Agency, population category, county and regional figures are shown in other Sections.

DEFINITION: Aggravated assault is defined as an unlawful attack by one person upon another with the intent to inflict great bodily injury, usually accompanied by the use of a weapon or other means likely to produce death or serious bodily harm. Attempts are included since it is not necessary that an injury result when a gun, knife or other non-personal weapon is used which could and probably would result in serious personal injury were the crime successfully completed. Attacks with personal weapons must result in serious personal injury to be classified as an aggravated assault. Attempted murders are included in this category. The number of offenses in this classification does not include assaults on law enforcement officers in the line of duty, a total of 1,191 in 1979.

One offense is counted for each victim of an aggravated assault.

DEFINITION: Theft is the unlawful taking or stealing of property or articles of value without the use of force, violence or fraud. It includes crimes such as shoplifting, pocket-picking, purse-snatching, thefts from motor vehicles, thefts of motor vehicle parts and accessories, bicycle thefts, etc. Beginning in January, 1972, thefts from temporary residence, recreation-type dwellings (e.g., camping tents, campers, camping trailers, houseboats and similar recreational vehicles, trailers or dwellings) were included in this offense category. Previously, these were classified as burglaries. For purposes of Uniform Crime Reporting, this offense category does not include embezzlement, unlawful conversion, forgery, counterfeiting, worthless checks or theft by bailees. Motor vehicle theft is a separate Index crime and, therefore, is also excluded. Attempted thefts are included.

One offense of theft is counted for each distinct operation.

ARRESTS

Arrest statistics provide a measure of law enforcement activity as it relates to crime. These statistics also serve as an index reflecting involvement in criminal acts according to the age, sex and race of the perpetrator. However, law enforcement emphasis and arrest practices vary within the same department over the course of time, and from community to community. While arrests for the more serious crimes such as robbery and burglary are more likely the result of standard procedures, the volume and rate of arrests for offenses such as disorderly conduct and non-aggravated assault frequently can display considerable variation between agencies. Differences in administrative policies, as well as dissimilarities in local crime problems, are reflected in the arrest rates reported by individual law enforcement agencies in Wisconsin.

ARRESTS OF JUVENILES

(All proportions are based on total juvenile arrests.)

Juveniles are scored as having been "arrested" for purposes of Uniform Crime Reporting procedures, although under Wisconsin Statutes law enforcement custody of a child shall not be legally considered an arrest. Arrests, in the case of juveniles, include those who have committed a crime and are taken into custody under circumstances such that were the juvenile an adult, an arrest would be scored. All violations by persons under eighteen years of age are included, where some police or other official action is taken. Juveniles taken into custody for their own protection, such as in neglect cases, are not counted as being arrested if they have not committed a crime.

* *Employe data shown are as of July 1, 1979, and pertain to all law enforcement agencies responding to a Crime Information Bureau Survey. Care should be used in comparing with other years because of non-responding.*

** *Law enforcement employe ratios presented here should not be construed as being recommended. Determination of required law enforcement strength in any jurisdiction should be based on an assessment of the various factors which create the need for police service.*

*** *Arrest rates may vary from one community to another due to differences in police policy and practices, as well as differences in local crime problems. Many law enforcement officers have duties such as administration, records and other non-field assignments such that they do not become involved in making the types of arrests recorded in the Uniform Crime Reporting Program.*

DEATHS AND ASSAULTS OF LAW ENFORCEMENT OFFICERS

1979

SUMMARY

- 4 law enforcement officers were killed in the line of duty, all by accident or negligence.
- 1,191 total assaults on law enforcement officers (an increase of 27 percent from 1978).

  11.6 assaults per 100 full-time actual officers.

  11 percent of all assaults occurred in July.

  29 percent of all assaults occurred in the July-September quarter.
- 61 percent of all assaults resulted in some form of injury to the officer.*

  In 93 percent of these assaults with injury, personal weapons such as hands, fists or feet were employed.
- 38 percent of all the assaults occurred while officers were assigned to a two-man vehicle.
- 29 percent of all assaults occurred while responding to disturbance calls.
- 22 percent of all assaults occurred while attempting arrests during situations other than robbery matters, burglary matters, disturbance calls, civil disorders or traffic matters.
- 18 percent of all assaults occurred while handling prisoners.
- In 91 percent of the total assaults on officers, personal weapons such as hands, fists or feet were employed.
- 65 percent of all assaults occurred between 8:00 p.m. and 4:00 a.m.

  22 percent of all assaults occurred between 12:01 a.m. and 2:00 a.m.
- 96 percent of all assaults on officers were cleared.

** In classifying an assault of an officer as being one "with injury", the extent or seriousness of the injury is not a consideration. A slight injury (sprain, bruise, etc.) is sufficient for the offense to be classified as one with injury.*

---

1. Employe data shown are as of July 1, 1979, and pertain to all law enforcement agencies responding to a Crime Information Bureau Survey. Care should be used in comparing with other years because of non-responding.

2. Law enforcement employe figures presented here should not be construed as being recommended. Determination of required law enforcement strength in any jurisdiction should be based on an assessment of the various factors which create the need for police service. In particular, Sheriffs' Offices assist in varying ways the other law enforcement agencies in their counties, including Police Departments that are Direct Reporters in the Uniform Crime Reporting Program.

3. Direct UCR Reporters are underlined.

4. "SHERIFF'S OFFICE" ("SO") employe data include Traffic Police in the following counties: Brown, Calumet, Chippewa, Clark, Dane, Dodge, Fond du Lac, Kewaunee, La Crosse, Manitowoc, Monroe, Oconto, Pepin, St. Croix and Waupaca.

5. The total number of actual employes, the total number of authorized employes, and the number of actual specially-funded employes are shown in the following format:

   Total Number Actual/Total Number Authorized (Number Actual Specially-Funded)

   Specially-funded employes are included in the actual and authorized figures. Specially-funded employes are defined as those paid 50% or more with Comprehensive Employment and Training Act (CETA) funds or with Federal, State or private grants (for example, Law Enforcement Assistance Administration/Wisconsin Council on Criminal Justice).

   Only one figure is shown for agencies at authorized strength, if there were no specially-funded employes.

BACKGROUND

The computer printout tables contained in this Section were designed to furnish, to the extent possible, a ready comparison with statistical tables contained in the Federal Bureau of Investigation's Crime in the United States annual report. However, tables analogous to those contained in the nationwide document were not always developed for the State of Wisconsin, and the Wisconsin tables display some information not present at the national level. These differences arise in an effort to make this Crime and Arrests volume of unique value to the reader. This report does not contain comparisons of Wisconsin with other states and the Nation. Data for other states were unavailable at the time of this writing, and consequently this comparative analysis will be subsequently issued as a Supplemental Annual Report.

Data are presented by political subdivisions (departments listed alphabetically within counties, counties listed alphabetically within Wisconsin Administrative Districts) and by population categories. Population categories for Wisconsin cities were designed to enable the grouping of departments roughly comparable in terms of populations served. The city size divisions are as follows: over 250,000 (Milwaukee); 50,000-250,000; 25,000-50,000; 10,000-25,000; 5,000-10,000 and under 5,000.

The Suburban Area category employed in the Wisconsin tables matches the definition used at the national level. Standard Metropolitan Statistical Areas (SMSA's) have been established nationwide to reflect regions of population concentration, and they are generally made up of an entire county or group of counties having at least one central city of 50,000 or more inhabitants, with the whole meeting the requirements of certain metropolitan characteristics. SMSA counties in Wisconsin include Brown, Calumet, Chippewa, Dane, Douglas, Eau Claire, Kenosha, La Crosse, Milwaukee, Outagamie, Ozaukee, Racine, Rock, St. Croix, Washington, Waukesha and Winnebago.

Suburban Areas include all cities under 50,000 population and all Sheriffs' Offices in these SMSA counties, and the category reflects crime problems in regions surrounding large population centers. Suburban cities are also included in other city size groups according to their population. Rural Areas in Wisconsin is defined as Sheriffs' Offices in non-SMSA counties. Similarly, Non-Suburban Cities are those cities under 50,000 population which are outside of Standard Metropolitan Statistical Areas. The term Cities refers to Police Departments serving cities, villages, townships or university campuses and include Devils Lake State Park and State Protective Service.

Total Wisconsin, in terms of these categories, is therefore conveniently either:

All Cities
+ Suburban Area Sheriffs
+ Rural Areas
+ State Level Agencies
STATE TOTAL

or

Cities over 250,000 Population (Milwaukee)
+ Cities 50,000-250,000 in Population
+ Suburban Areas
+ Non-Suburban Cities
+ Rural Areas
+ State Level Agencies
STATE TOTAL

The breakdown of Wisconsin into the five major population categories (excluding state agencies) is frequently presented in the foregoing analysis. State Level Agencies are included in state totals unless other wise indicated.

Except in decennial census years, agency population estimates used in this publication are based on those determined by the Wisconsin Department of Administration and forwarded to local officials for purposes of state shared taxes distribution. The numbers of adults and juveniles in the (UCR reporting) jurisdiction served by a particular law enforcement agency are also estimated. Currently, they are based for the most part on the 1970 Census adult-juvenile proportions. Some Wisconsin cities are in more than one county and, for summarizations by geography, their total crimes, clearances, arrests and populations were allocated to the county in which the majority of the population resided. University campus Police Departments were assigned to city population categories based on student enrollment. However, for purposes of rate per population calculations in this document, their effective populations are zero. The total state population of 4,720,000 was the Bureau of the Census provisional estimate as of July 1, 1979.

This document assumes that each Wisconsin Sheriff's Office reported all Crime Index offenses coming to the attention of all law enforcement agencies in a county, with the exception of those occurring in the jurisdictions of, and consequently reported by, Direct UCR Contributors. That is, there were no agency crime counts that were not included in the reporting system.

Throughout this document, the word "arrest" is used to connote official law enforcement contact with juveniles where crimes have been committed, in keeping with the definitional concept at the national level. Juveniles are scored as having been "arrested" for purposes of Uniform Crime reporting procedures, although under Wisconsin Statutes law enforcement custody of a child shall not be legally considered an arrest.

APPENDIX

GLOSSARY

A

ADULT: A person 18 years of age or older.

AGGRAVATED ASSAULT: See Page 38.

ARREST: Taking into physical or other legal custody for committing an offense in the local reporting jurisdiction. Arrests for all criminal offenses are scored. Arrests for ordinance violations are included. Arrests for traffic offenses, with the exception of driving under the influence, are not scored. Included are those persons released without having been formally charged. (See Juvenile Arrest)

ARREST RATE: The number of arrests for a particular offense, or group of offenses, per 100,000 population. The formula is:

$$\frac{\text{Number of Arrests}}{\text{Population}} \times 100{,}000.$$

ARSON: Violations of Statutes and ordinances relating to arson and attempted arson. In the event a death results from arson, the incident would be classified as murder. If personal injury results, the situation would be classified as aggravated assault.

ASSAULT RATE/100 OFFICERS: The formula is:

$$\frac{\text{Number of Assaults on Officers}}{\text{Number of Officers}} \times 100.$$

B

BURGLARY: See Page 41.

C

CITIES: See Page T-2.

CLEARANCE (BY ARREST): An offense is cleared, or solved for crime reporting purposes, when at least one person is arrested, charged with commission of the offense and turned over to the court for prosecution.

CLEARANCE (EXCEPTIONAL): An offense is cleared exceptionally if ALL of these four questions can be answered "YES":

- Has the investigation definitely established the identity of the offender?
- Is there enough information to support an arrest, charge and turning over to the court for prosecution?
- Is the exact location of the offender known so that he could be taken into custody now?
- Is there some reason OUTSIDE the control of law enforcement that prevents his arrest, charging and prosecution?

CLEARANCE RATE: The number of clearances divided by the total number of offenses, expressed as a persent. The formula is:

$$\frac{\text{Number of Clearances}}{\text{Number of Offenses}} \times 100\%.$$

Offenses are reported as they become known to law enforcement agencies. Clearances are scored as they are made. Therefore, it is possible for the clearance rate to exceed 100 percent for a time period. Both clearances by arrest and exceptional clearances are included.

COMMERCIALIZED VICE - (PROSTITUTION AND): Sex offenses and attempts, of a commercialized nature, such as: prostitution; keeping bawdy house, disorderly house, or house of ill fame; pandering, procuring, transporting or detaining women for immoral purposes, etc.

CONTROLLED SUBSTANCES: Violations of State laws, specifically those relating to the unlawful possession, sale, use, growing, manufacturing and making of controlled substances. Arrests are recorded on the basis of the drug type (opium or cocaine and derivatives, marijuana, synthetic narcotics or other dangerous non-narcotic drugs) and on the basis of the violation (sale/manufacturing or possession).

CRIME INDEX: See Page 19. The Crime Index is generally used to measure the extent, fluctuation, distribution and nature of crime in our society.

Beginning in 1973 all thefts, regardless of value, were included as Crime Index offenses. Prior to this only thefts of a value of $50 or more were counted. This change affected the Theft, Property Crimes and total Crime Index offenses categories.

Effective in 1980, arson was added as a Property Crime.

CRIME INFORMATION BUREAU: Agency within the Division of Law Enforcement Services of the Wisconsin Department of Justice responsible for administering the Uniform Crime Reporting (Summary Statistics) System, the Identification System and the TIME System to serve Wisconsin law enforcement and criminal justice agencies.

CRIME RATE: The number of offenses per 100,000 population. The formula is:

$$\frac{\text{Number of Offenses}}{\text{Population}} \times 100{,}000.$$

CURFEW/LOITERING (JUVENILES): Violations of local curfew or loitering ordinances where such laws exist.

D

DISORDERLY CONDUCT: Committing a breach of the peace.

DRIVING UNDER THE INFLUENCE: Limited to the driving or operating of any vehicle or common carrier while under the influence of liquor or a controlled substances.

E

EMBEZZLEMENT: Misappropriation or misapplication of money or property entrusted to one's care, custody or control.

EMPLOYES PER 1,000 POPULATION: The formula is:

JUVENILE: A person under 18 years of age.

JUVENILE ARREST: Juveniles are scored as having been "arrested" for purposes of Uniform Crime Reporting procedures, although under Wisconsin Statutes law enforcement custody of a child shall not be legally considered an arrest. Arrests, in the case of juveniles, include those who have committed a crime and are taken into custody under circumstances such that were the juvenile an adult, an arrest would be scored. All violations by juveniles where some police or other official action is taken beyond a mere admonishment are included. Law enforcement contacts with juveniles where no offense has been committed are not scored as arrests. Juveniles taken into custody for their own protection, such as in neglect cases, are not scored as being arrested if they have not committed a crime. (See Arrest)

JUVENILE DISPOSITION: The action taken by a law enforcement agency in regard to the arrest of juvenile offenders. This action is scored according to four categories: (1) handled within department and released; (2) referred to court or probation department; (3) referred to public or private agency outside of court jurisdiction; or (4) referred to other law enforcement agency.

JUVENILE INVOLVEMENT IN CLEARANCES: The number of clearances involving exclusively juveniles divided by the total number of clearances, expressed as a percent. The formula is:

$$\frac{\text{Number of Clearances Involving Only Juveniles}}{\text{Number of Clearances}} \times 100\%.$$

L

LAW ENFORCEMENT OFFICER: Any sworn individual (male or female) acting in an authorized capacity (in line of duty) as an enforcement officer for a bona fide public law enforcement agency.
